COMPACT EXTERNAL DISPLAY+KEYBOARD UNIT FOR SEISMIC NETWORKS

DKU6000

This unit was designed to provide user interface with the economical seismic Data Loggers Models **DAS6501c** and **DAS6102c**. These models were introduced as economical alternatives to fully equipped seismic recorders, **DAS6501** and **DAS6102** respectively. When used in seismic arrays of ten or more autonomous stations, the 'c' models offer significant savings since they do not contain VGA LCD displays and weatherized keypads. Instead, the service personnel can employ a **DKU6000** box that plugs in directly into any 'c' recorder. It takes power from the recorder and provides an effective and convenient full PC-type user interface.

serve as an auxiliary device

DKU6000 enclosure is a fully weatherized, rugged, unsinkable heavy duty ABS plastic box, 250x205 x124mm, with a weatherized circular connector on the back panel. It contains a compact PC mini-keyboard and a large (25cm diagonally) LCD SVGA display. The unit weighs about 3kg.
